PR of China

21 August 2023

Dear Prof. Qian,

We are happy to invite you as a visiting scholar to work with me at the Data Science Institute, University of Technology Sydney, in Sydney, New South Wales, from November 21st to November 30th, 2023.

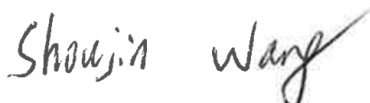

I understand the purpose of your visit will be to carry out collaborative research in the areas of data-driven public opinion and sentiment analysis. Additionally, I hope to use your visit as a possible means to enhance existing relationships between our two universities, UTS and USST.

UTS does not offer any financial assistance or accommodation but I am willing to help you find suitable accommodation such as home-stay as close as possible to the university. I would be your premier contact at UTS and among the specialists at UTS whom you could consult. You would also be able to contact other experts in DSI and UTS. A more detailed itinerary can be prepared once I know more about your research plans.

UTS: DSI is one of the global leaders in data science and ethical artificial intelligence solutions. It harnesses its leading cross-disciplinary research expertise in data science and artificial intelligence to develop innovative solutions for businesses, government and the community. The Data Science Institute drives and pioneers impactful data science research for Australia. DSI is an award-winning data science institute with real impact. Since 2018, DSI has won two Australian Museum Eureka Prizes, six major industry awards and published 200+ papers in major national and international journals and conferences.

Again, congratulations and I am looking forward to working with you soon here in Sydney.

Yours Sincerely

Dr Shoujin Wang, Lecturer at Data Science Institute,
University of Technology Sydney
